

Electric Conversion Kits designed for Ground Support Equipment

CEV's experience in the design and installation of conversion kits gives you the benefit of a drop-in system that is easy to install and customized to your requirements.

From 48 volt to over 100 volts our AC drive systems offer superior performance over previous DC systems. Combine this system with our Lithium batteries for extended run times.

Kits come complete with chargers, controllers, motors, control boxes and with all the switches, relays, dashes, gauges and harnesses.

All the parts you need from one experienced supplier to efficiently and quickly convert your equipment.

Canadian Electric Vehicles has the experience of converting over 60 aircraft refueling trucks to electric power. These vehicles are in use at airports in North America, Europe, Middle East and Australia.

Canadian Electric Vehicles
Over 20 years experience with GSE conversions

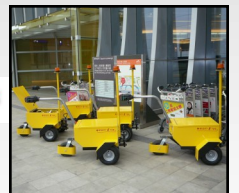

Canadian Electric Vehicles can also install our kits into your equipment.
Converted vehicles are simple to maintain and operate.
Reliable, safe and efficient.
