Heavy Duty Electric Trucks

canadian electric vehicles of Errington B.C. received an order for fifteen of its electric powered trucks this week. The 12,000lb GVW trucks were ordered by Air BP (British Petroleum) for aircraft refueling in Puerto Rico and Dallas. Air BP has been testing one truck for the past year and is very pleased with it's performance.

"Airports across the US are in the process of cleaning up their emissions and the electric powered service trucks are ideal for the job says company president Randy Holmquist, I just wish we could sell some trucks in Canada, maybe Kyoto will help".

canadian electric vehicles has developed the electric truck over the past few years and will now have over thirty units in use at airports across the US. **canadian electric vehicles** builds a wide range of electric vehicles for both on and off-road applications and sells components and kits for customers to convert their own vehicles from gas to electric.
